Replacement Elements Available For Ford 5R Transmission Filters

Replacement 5R110W bypass filter elements for America's best selling 2004 and newer Ford trucks (6 liter gas and diesel models) are now available!

Ford utilizes this new filter system – that functions in a secondary circuit of bypass and micro filtration – to provide cleaner transmission parts and improved performance and durability. Key to the superiority of this system is the unique radially wound depth-type filter element. This technology helps ensure the most efficient particle filtration as well as elimination of water and chemical contaminants, making it the best choice for heavy service vehicles.

This element – including O ring – is available directly from your local distributor.

Ford 5R110W Filter Element

Replaces Motorcraft PN	FT-145
Dimensions	50mm O.D. x 90mm L
Weight	48g
Filter Surface Area	150 sq. cm
Flow Direction	Radial
