## NEWS RELEASE

### NTZ MICRO FILTRATION RECLOCATES TO EXPANDED FACILITY

Wixom, Mich., USA – Jan. 19, 2009 – NTZ Micro Filtration has announced its relocation to Wixom, Michigan to expand its current operations. The new facility allows for onsite testing, product development and logistical distribution to provide a wider range of services to its North American customer base.

NTZ develops and manufactures original equipment and aftermarket bypass micro filtration for hydraulic, transmission, and engine systems for a wide range of off-road, heavy equipment, industrial, and automotive companies. Specialized applications include advanced transmission filtration development for dual clutch (DCT) and continuously variable transmissions (CVT). In addition, NTZ also provides contamination management consulting services to a variety of clients including a Fortune 500 heavy equipment manufacturer, leading agricultural corporation, and a top 50 OEM automotive power train supplier.

Headquartered in Rotterdam, The Netherlands, NTZ's North American location in Wixom provides fluid contamination solutions and consulting services to support the NAFTA region. The company also has a manufacturing facility in Oscoda, Michigan.

The company's patented bypass micro filter systems and proprietary elements provide superior fluid cleanliness compared to that realized by using standard filters. Ultra-fine filtration has several positive effects on fluid systems as a result of reduced contamination, including reduced failures and warranty claims, consistent performance levels and improved durability.
